

Part B: Prevention Checklist

- A crucial **PIN Rule** that everyone needs to know is that you should never share your UPI PIN online by entering it to receive money. Instead, you should only enter your PIN when you wish to transfer money, check balance etc.
- **QR Warning:** Do not scan QRs from strangers especially to receive payments.
- Only use official banking apps and UPI apps, and never install them through links on websites or from unknown sources. Always download official Apps from Play Store and App Store.
- **SIM Binding:** Keep your phone and bank SMS codes close as these are used for device binding.
- When shopping online for items like these, stick to sellers that have been verified (indicated above in the header) and avoid any "direct" purchase enquiries made via social media as these are likely to be scams.
- **Privacy:** Set a strong lock screen and remember to use a unique UPI PIN that is not the same as your ATM PIN.
- Never share your UPI details and always check the recipient's name on UPI apps before clicking "Pay" or "Confirm".
- **Reporting:** Suspicious transaction, if any, should immediately be reported to National Cyber Crime Portal i.e. cybercrime.gov.in/Helpline Number: 1930.
